

Jamming detection system | monitoring device

Jamming is an interfering signal which disables / blocks a wireless signal. Typically the signal that is blocked is the locking/closing of a vehicle, garage or automated gate. Wireless alarm sensors and alarm remote controls may also be jammed / blocked disabling their functionality. MAMI's jamming detection unit and system provide security operators and home owners the tools to be notified if jamming has been detected. In the case of a shopping center parking lot, the area in which jamming occurred can be transmitted to the local control room for fast reaction

- MULTIPLE JAMMING DETECTION FREQUENCIES
- GSM (VEHICLE TRACKER) JAMMING DETECTION AVAILABLE
- UP TO 100M DETECTION RANGE
- PROGRAMMABLE JAMMING DETECTION TIME
- BUILT-IN BATTERY BACKUP
- MAINS FAIL AND BATTERY LOW REPORTING
- 2 LOCAL OUTPUTS (SIREN & BUZZER)
- APP NOTIFICATIONS DIRECT TO CELLULAR PHONE
